Information Sheet-1	obtaining feedback from <i>clinical expert</i>
---------------------	--

### 1. obtaining feedback from *clinical expert*

- A good pre hospital care report documents the care that was provided and the patient's condition on arrival at the scene. It also documents any changes in the patient condition upon arrival at the hospital. The information in the report also proves that you have provided proper care. Pre hospital care report also provides valuable administrative information. For example it is used to evaluate response time, equipment usage and other area of administrative responsibility
- There are two types of report forms. The first type is traditional written form with check boxes and a narrative section. Fill it in completely. Narrative section of form describes what you see and what you do. Include significant negative findings and important observations about the scene. Do not record your conclusion about the incident. Also avoid radio codes. Use only standard abbreviations.
