LEARNING GUIDE #13

Unit of Competence: -	Operate Database Application
Module Title: -	Operating Database Application
LG Code:	<u>EIS ITS2 M04 1019 LO4-LG13</u>
TTLM Code:	<u>EIS ITS2 TTLM 1019 V1</u>

LO 4: Create database Forms

Introduction Learning Guide # 13

This learning guide is developed to provide you the necessary information regarding the following content coverage and topics –

- Creating a form using a wizard.,

This guide will also assist you to attain the learning outcome stated in the cover page.

Specifically, upon completion of this Learning Guide, you will be able to –

- Use wizard to create a simple form
- Open and record existing database through a simple form modified
- *Rearrange objects* within the form to accommodate information requirements

1: Learning Instructions

1. Read the specific objectives of this Learning Guide.
2. Follow the instructions described in number 3 to 18.
3. Read the information written in the “Information Sheets 1”. Try to understand what are being discussed. Ask you teacher for assistance if you have hard time understanding them.
4. Accomplish the “Self-check 1” in page 5.
5. Ask from your teacher the key to correction (key answers) or you can request your teacher to correct your work. (You are to get the key answer only after you finished answering the Self-check 1).
6. If you earned a satisfactory evaluation proceed to “Information Sheet 2”. However, if your rating is unsatisfactory, see your teacher for further instructions or go back to Learning Activity #1.
7. Submit your accomplished Self-check. This will form part of your training portfolio.
8. Read the information written in the “Information Sheet 2”. Try to understand what are being discussed. Ask you teacher for assistance if you have hard time understanding them.
9. Accomplish the “Self-check 2” in page 7.
10. Ask from your teacher the key to correction (key answers) or you can request your teacher to correct your work. (You are to get the key answer only after you finished answering the Self-check 2).
11. Read the information written in the “Information Sheets 3 . Try to understand what are being discussed. Ask you teacher for assistance if you have hard time understanding them.
12. Accomplish the “Self-check 3” in page 9.

13. Ask from your teacher the key to correction (key answers) or you can request your teacher to correct your work. (You are to get the key answer only after you finished answering the Self-check 3).
14. Read the “Operation Sheet 1” in page 10. and try to understand the procedures discussed.
15. If you earned a satisfactory evaluation proceed to “Operation Sheet 2” in page 15. However, if your rating is unsatisfactory, see your teacher for further instructions or go back to Learning Activity #1.
16. Read the “Operation Sheet 2” and try to understand the procedures discussed.
17. If you earned a satisfactory evaluation proceed to “Operation Sheet 3” in page 17. However, if your rating is unsatisfactory, see your teacher for further instructions or go back to Learning Activity #1.
18. Read the “Operation Sheet 3” and try to understand the procedures discussed.
19. Do the “LAP test” in page 20 (if you are ready). Request your teacher to evaluate your performance and outputs. Your teacher will give you feedback and the evaluation will be either satisfactory or unsatisfactory. If unsatisfactory, your teacher shall advise you on additional work.

Information Sheet 1

Using wizard to create a simple form

1.1 Introduction

A form is a screen that allows you to enter, change, and view the data in a database. Think of forms as windows into your data that help users understand and work with that data.

Forms are made up of **controls**, such as text boxes, buttons, document tabs, and drop-down lists, grouped in a way that makes them easy to use and helps you get work done. The controls in the form are usually **bound**, or connected, to the tables or queries in your database — but not always. For example, a control that displays your corporate logo doesn't have to be bound to a table field. It can just point to the image it displays. In addition to entering data, you can use forms in other ways. For example, you can create a form that asks for input, and then generates a custom report based on that input.

In Access 2007, a **form** is an object that generally serves three purposes:

- To allow users to perform data entry. Data can be inserted, updated, or deleted from a table using a Form object.
- To allow users to enter custom information, and based on that information perform a task. For example, you may want to ask a user for parameters before running a report.
- To allow users a method of navigating through the system. For example, you may create a form where a user can select a form to load, a report to run, etc.

]

1.2 Creating Forms using a wizard

Creation of a form by using a wizard is the Ms Access pre-defined way of creating a form by simply following the series of steps and choosing which field and format you would want for your form.

Self-check 1	Using wizard to create a simple form
--------------	--------------------------------------

Name: _____

Date: _____

Time started: _____

Time finished: _____

Directions: Answer all the questions listed below.

1. Form is made up of? (1 points)
2. Way of creating forms? (2 Point)
3. Is a screen that allows you to enter, change, and view the data in a database? (1 points)
4. The most important tools can be found in? (1 point)
5. A form is an object that generally serves three purposes? (3 points)
6. List & Discuss on the different types of Controls in MS access? (12 point)

: Satisfactory rating – above 17 points Satisfactory & below 16 points Unsatisfactory

(You can ask you teacher for the copy of the correct answer)

Information Sheet 2

Opening Existing Database& Modifying Records

What Database

A **database is an organized collection of data, generally stored and accessed electronically from a computer system.** Where databases are more complex they are often developed using formal design and modeling techniques.

- Types of data bases. Databases have evolved since their inception in the 1960s, beginning with ...
 - ✓ Relational database. A relational database, invented by E.F. Coded at IBM in 1970, is a tabular ...
 - ✓ Distributed database. A distributed database is a database in which portions of the database are ...
 - ✓ Cloud database. A cloud database is a database that has been optimized or built for a virtualized ...

Open an existing data base

There are the different methods you can use to open existing Access databases. You can open databases from Windows Explorer or from within Access itself. You can open multiple databases at once, and you can also create desktop shortcuts that open database objects directly.

Self-Check -2	Written Test
---------------	--------------

Directions: Answer all the questions listed below. Use the Answer sheet provided in the next page:

1. To retrieve Information Saving is important(3)
 - A. True
 - B. False
2. Saving your work in Access is a little different from saving in most Office apps.(3)
 - A. False
 - B. True

Note: Satisfactory rating - 3 and 5 points Unsatisfactory - below 3 and 5 points

You can ask you teacher for the copy of the correct answers.

Answer Sheet

Score = _____

Rating: _____

[://support.office.com/en-us/article/Open-an-existing-database-6F893B9D-9007-4628-930B-7EE4864A883](https://support.office.com/en-us/article/Open-an-existing-database-6F893B9D-9007-4628-930B-7EE4864A883)

Information Sheet 3	Rearranging Objects with in the form
---------------------	--------------------------------------

Objects : A **Form object** refers to a particular Microsoft **Access form**. A **Form object** is a member of the **Forms collection**, which is a collection of all currently open **forms**. Within the **Forms** collection, individual **forms** are indexed beginning with zero.

Forms are made up of **controls**, such as text boxes, buttons, document tabs, and drop-down lists, grouped in a way that makes them easy to use and helps you get work done. The controls in the form are usually **bound**, or connected, to the tables or queries in your database — but not always. For example, a control that displays your corporate logo doesn't have to be bound to a table field. It can just point to the image it displays. In addition to entering data, you can use forms in other ways. For example, you can create a form that asks for input, and then generates a custom report based on that input.

Self-Check -3	Written Test
---------------	--------------

1. **Directions:** Answer all the questions listed below. Use the Answer sheet provided in the next

1. Forms are made up of (2)

- A. Controls
- B. Tables
- C. A&B

2 The controls in the form are usually (2)

- A. Bound
- B. Objects
- C. All of the above

3 ----- is a member of the Forms collection(2)

- A. Form object
- B. Controls
- C. Texts

Note: Satisfactory rating - 3 and 5 points

Unsatisfactory - below 3 and 5 points

You can ask you teacher for the copy of the correct answers.

Answer Sheet

Score = _____

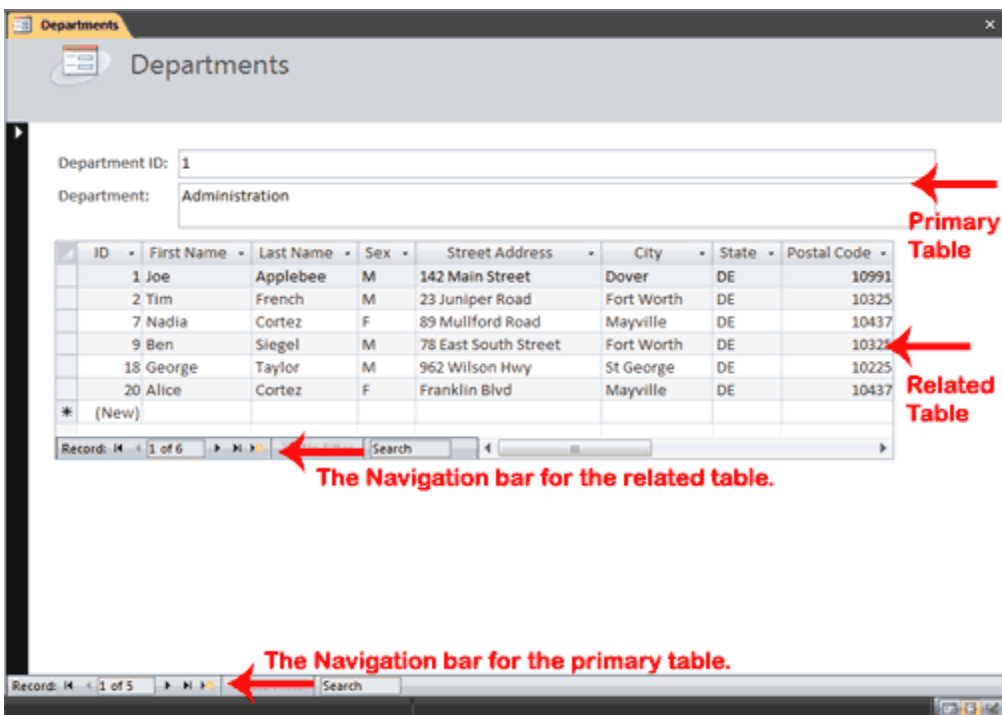

Rating: _____

Operation Sheet 1

Using a wizard to create a simple Form

Steps to create a form

1. Open the Navigation pane.
2. Click the table or query on which you want to base your form.
3. Activate the Create tab.
4. Click Form in the Forms group. Access creates a form.

The screenshot shows an Access form titled 'Departments'. It has two main sections. The top section is for the 'Primary Table' (Departments), with fields for 'Department ID' (value: 1) and 'Department' (value: Administration). Below this is a table with columns: ID, First Name, Last Name, Sex, Street Address, City, State, and Postal Code. The bottom section is for the 'Related Table' (Employees), with columns: ID, First Name, Last Name, Sex, Street Address, City, State, and Postal Code. Red arrows point to the 'Primary Table' and 'Related Table' labels, and the navigation bars for each.

ID	First Name	Last Name	Sex	Street Address	City	State	Postal Code
1	Joe	Applebee	M	142 Main Street	Dover	DE	10991
2	Tim	French	M	23 Juniper Road	Fort Worth	DE	10325
7	Nadia	Cortez	F	89 Mullford Road	Mayville	DE	10437
9	Ben	Siegel	M	78 East South Street	Fort Worth	DE	10325
18	George	Taylor	M	962 Wilson Hwy	St George	DE	10225
20	Alice	Cortez	F	Franklin Blvd	Mayville	DE	10437

You can use the Navigation bars to move through the records on a form.

The image shows a close-up of the navigation bar of the form. It includes a 'Records' section with a '3 of 21' indicator. Red arrows numbered 1 through 6 point to specific navigation controls: 1 points to the 'Records' label, 2 points to the 'Previous' button, 3 points to the 'First' button, 4 points to the 'Next' button, 5 points to the 'Last' button, and 6 points to the 'Search' button.

1	Go to First Record
2	Go to Previous Record
3	The Current Record
4	Go to Next Record
5	Go to Last Record
6	Create a New (Blank) Record

Tip: After you create a form, you can save it. You can open a saved form at any time.

Steps to save a form

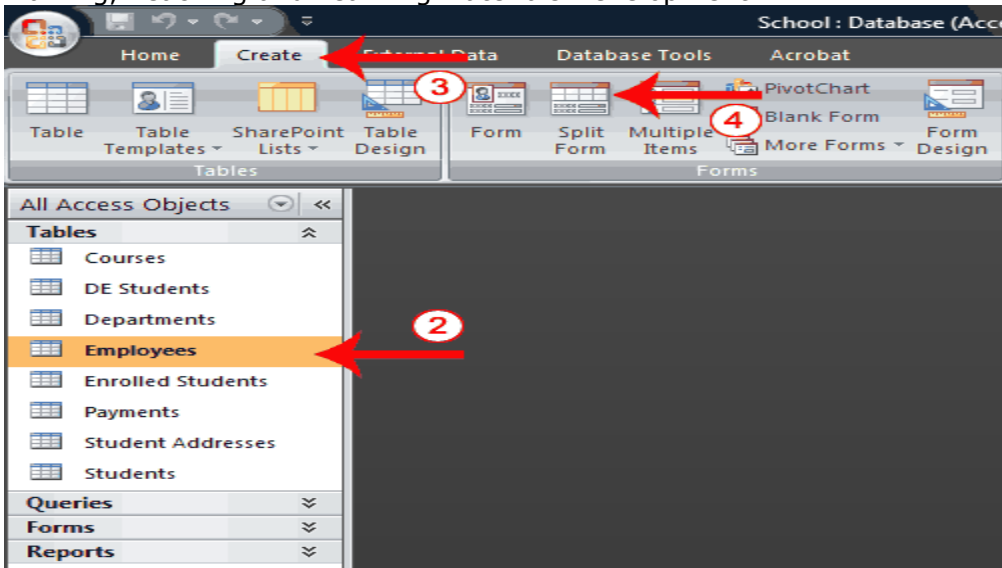

1. Click the Save button on the Quick Access toolbar. Access saves the form unless you are saving for the first time. If you are saving for the first time, the Save As dialog box appears.
2. Type the name you want to give the form.
3. Click OK. Access saves the form. You can now access the form by using the Navigation pane.

You can also save by right-clicking a form's tab and then selecting Save from the menu that appears. Access saves the form unless you are saving for the first time. If you are saving for the first time, the Save As dialog box appears. Type the name you want to give the form and then click OK. Access saves the form. You can now access the form by using the Navigation pane.

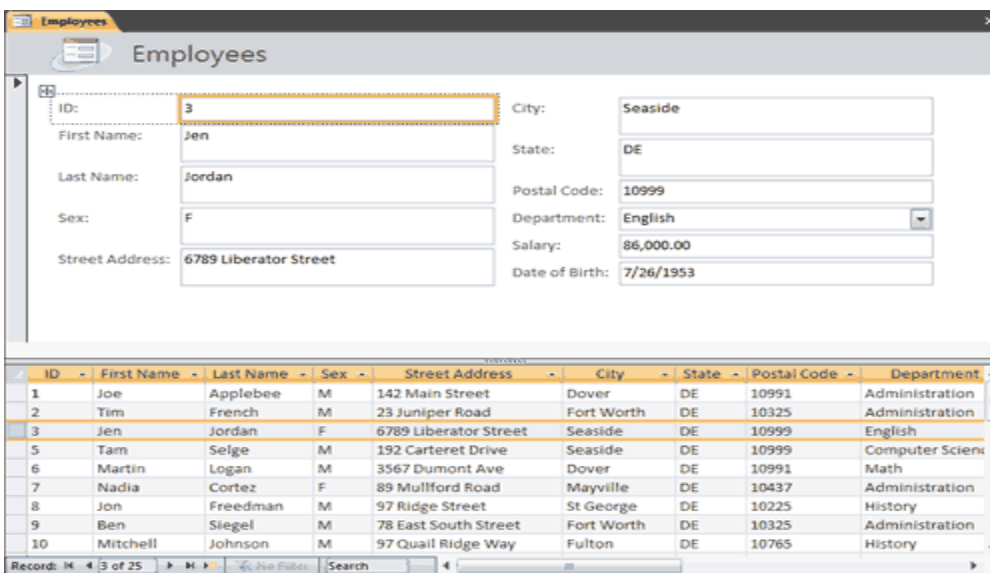

Create a Split Form

A split form is a form in which the same data is displayed in two views simultaneously. One part of the form displays in Form view (stacked fields), while the other part displays in Datasheet view. The two views are synchronized, so as you select a field in one view, it is automatically selected in the other view. You can add, change, or delete the data in either view. Using a split form gives you the benefits of two types of forms in a single form. For example, you can use the datasheet portion to locate records and the form portion to edit records.

To create a split form

1. Open the Navigation pane.
2. Click the table or query on which you want to base your form.
3. Activate the Create tab.
4. Click Split Form in the Forms group. Access creates a split form.

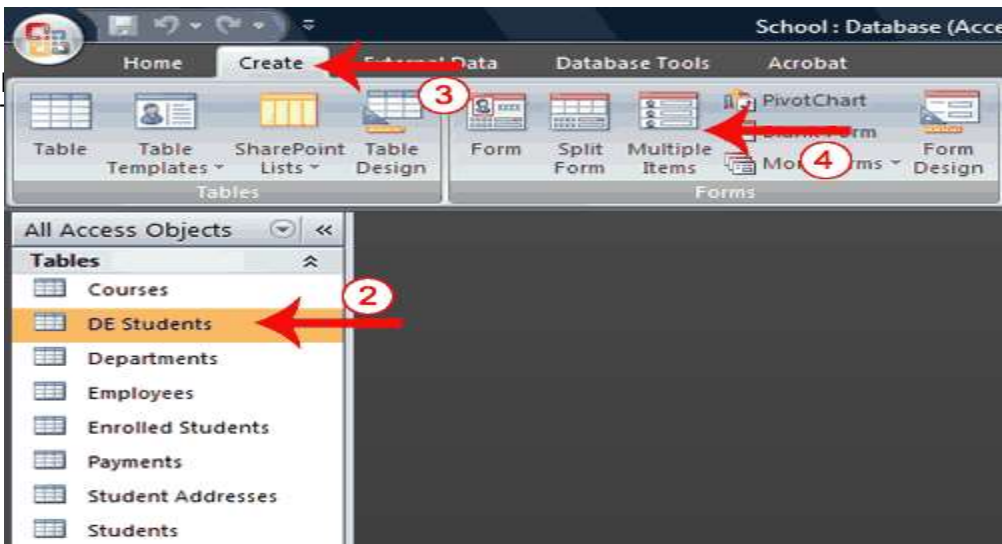

ID	First Name	Last Name	Sex	Street Address	City	State	Postal Code	Department
1	Joe	Applebee	M	142 Main Street	Dover	DE	10991	Administration
2	Tim	French	M	23 Juniper Road	Fort Worth	DE	10325	Administration
3	Jen	Jordan	F	6789 Liberator Street	Seaside	DE	10999	English
5	Tam	Selge	M	192 Carteret Drive	Seaside	DE	10999	Computer Scienc
6	Martin	Logan	M	3567 Dumont Ave	Dover	DE	10991	Math
7	Nadia	Cortez	F	89 Mullford Road	Mayville	DE	10437	Administration
8	Jon	Freedman	M	97 Ridge Street	St George	DE	10225	History
9	Ben	Siegel	M	78 East South Street	Fort Worth	DE	10325	Administration
10	Mitchell	Johnson	M	97 Quail Ridge Way	Fulton	DE	10765	History

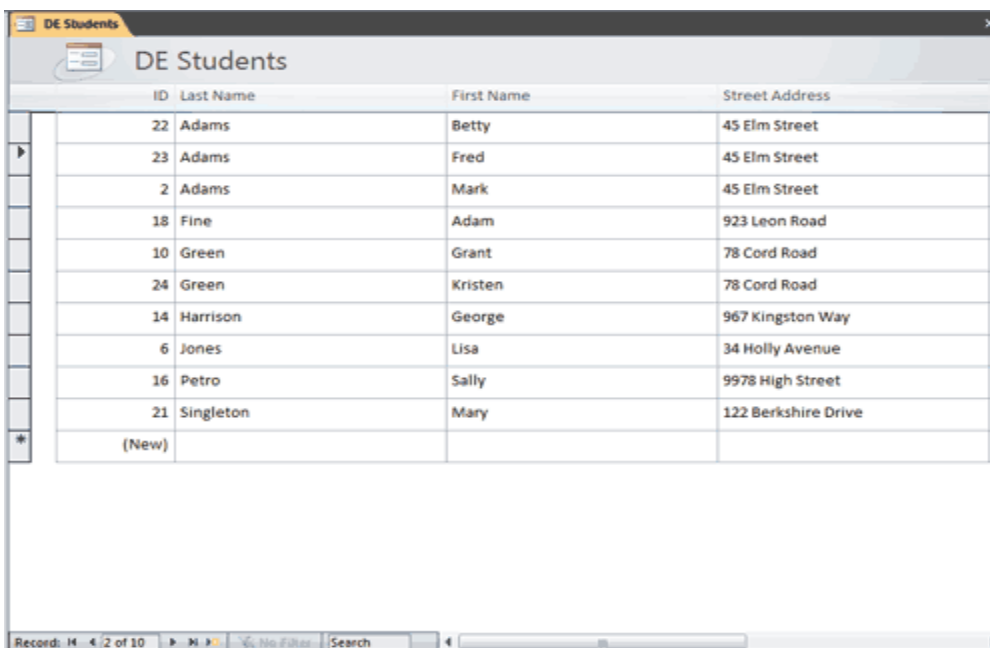

Create a Multiple Items Form

You can use the Multiple Items button on the Forms tab to create a form that displays multiple records, one record per row.

To create a multiple items form

1. Open the Navigation pane.
2. Click the table or query on which you want to base your form.
3. Activate the Create tab.
4. Click Multiple Items in the Forms group. Access creates a multiple items form.

Tip: A view is a way of looking at an Access object. Forms have three views: Form view, Layout view, and Design view. You can enter, edit, and view data in Form view. You can modify a form in Layout view or Design view. In Layout view, you can see your data, and the form you see closely resembles what your form will look like when you view it in Form view. You can make most, but not all, changes to your form in Layout view. Design view displays the structure of your form. In this view you cannot see the underlying data, but you can perform some tasks in Design view that you cannot perform in Layout view. This tutorial focuses on Layout view.

To change the view

1. Open the form.
2. Activate the Format tab.
3. Click the down-arrow under the View button. A menu appears.
4. Click the view you want.

To change the size of a field

1. Click a side of the field and drag to change the width of the field.
2. Click the top or bottom of a field and drag to change the height of a field.

To move a datasheet

1. Click the datasheet to select it.
2. Click and drag the four-sided arrow in the upper-right corner to move the datasheet.

To resize a datasheet

1. Click the datasheet to select it.
2. Click a side of the datasheet and drag to change the width.
3. Click the top or bottom of the datasheet and drag to change the height.

To apply an AutoFormat

The AutoFormat option on the Format tab enables you to apply formats quickly, such as background colors, field colors, field label colors, and fonts.

1. Activate the Format tab.
2. Click AutoFormat. The AutoFormat menu appears.
3. Click the format you want to apply.

To change a form title

When you create a form, by default, Access uses the form name as the title. You can change the title.

1. Activate the Format tab.
2. Click the Title button.
3. Type the new title.

To add the date and time

You can easily add the date and time to your form.

1. Activate the Format tab.

2. Click the Date and Time button. The Date and Time dialog box appears. Select the date and time format you want. The date and time appear on your form.

<https://support.office.com/en-us/article/Open-an-existing-database-6F893B9D-9007-4628-930B-7EE4864A8833>

Operation Sheet 2	Opening & Modifying Existing database
-------------------	---------------------------------------

- To Open a database from within Access
 - ✓ On the getting started page of Access, Click **Open Other Files**.
 - ✓ On the **Open** area of the backstage view, click **Browse**.
 - ✓ Click a shortcut in the **Open** dialog box, or in the **Look in** box, click the drive or folder that contains the database that you want.
 - ✓ In the folder list, browse to the folder that contains the database.
 - ✓ When you find the database, do one of the following:
 - Double-click the database to open it in the default mode specified in the **Access Options** dialog box or the mode that was set by an administrative policy.
 - Click **Open** to open the database for shared access in a multi-user environment so that you and other users can read and write to the database.
 - Click the arrow next to the **Open** button and then click **Open Read-Only** to open the database for read-only access so that you can view but not edit it. Other users can still read and write to the database.
 - Click the arrow next to the **Open** button and then click **Open Exclusive** to open the database with exclusive access. When you have a database open with exclusive access, anyone else who tries to open the database receives a "file already in use" message.
 - Click the arrow next to the **Open** button and then click **Open Exclusive Read-Only** to open the database for read-only access. Other users can still open the database, but they are limited to read-only mode.
- To open one of the last several databases you had open,

- ✓ click the file name in the **Recent** list on the getting started page. Access opens the database with the same option settings it had the last time you opened it. If the list of recently used files is not displayed:
 - Click **File > Options**.
 - In the **Access Options** dialog box, click **Client Settings** or **Advanced**.
 - Under **Display**, type a number in the **Show this number of Recent Databases** box.

Create a desktop shortcut to open a database object

- ✓ Open the database containing the object for which you want to create a shortcut.
- ✓ Resize the Access window and minimize any other open windows so that you can see the desktop behind the Access window.
- ✓ In the Navigation Pane, find the object for which you want to create the shortcut.
- ✓ Drag the object from the Navigation Pane to the desktop. When you release the mouse button, the shortcut is created on the desktop.
- ✓ If you want the shortcut in a location other than the desktop, use Windows Explorer to move the shortcut to the location you want.

Operation Sheet 3	Rearranging objects within the form
-------------------	-------------------------------------

- To Add a Command Button Using a Control Wizard
 - Open the form in Design View

- ✓ Verify the Control Wizards command is selected in the Controls group on the Form Design Tools Design Contextual tab
- ✓  Click the Button command in the Controls group on the Form Design Tools Design Contextual tab
- ✓ Click on your form where you want the command button to be inserted

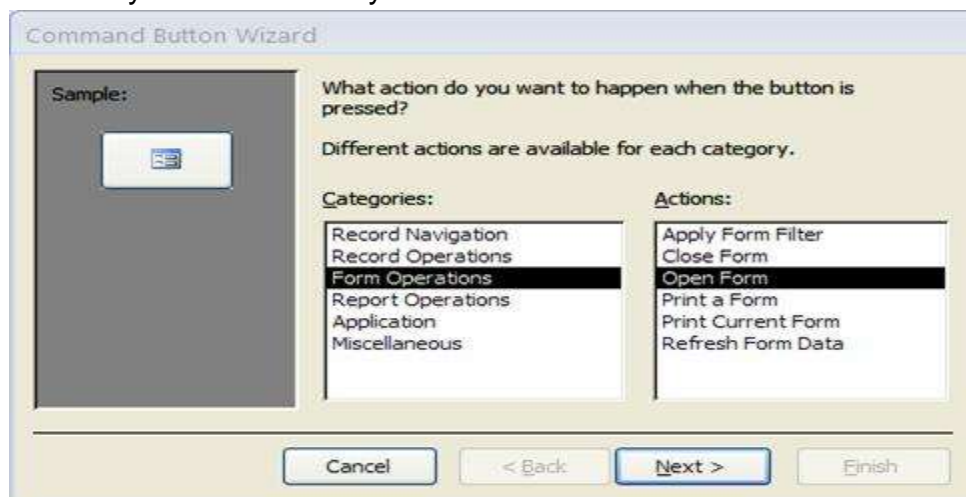

Figure 31. Command Button Wizard - Choose a Category & Action

- ✓ Select a category and action
- ✓ Click Next

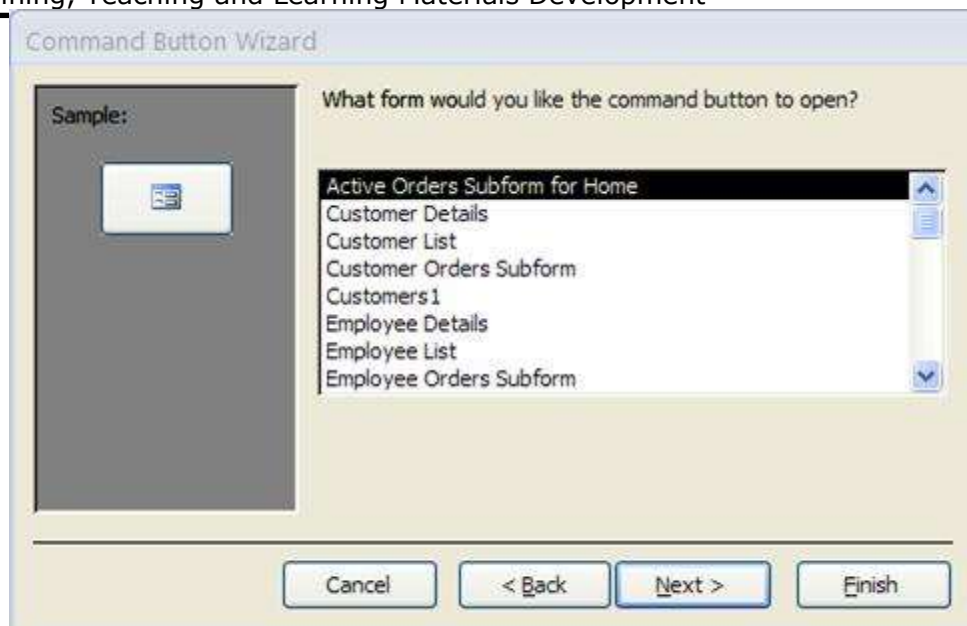

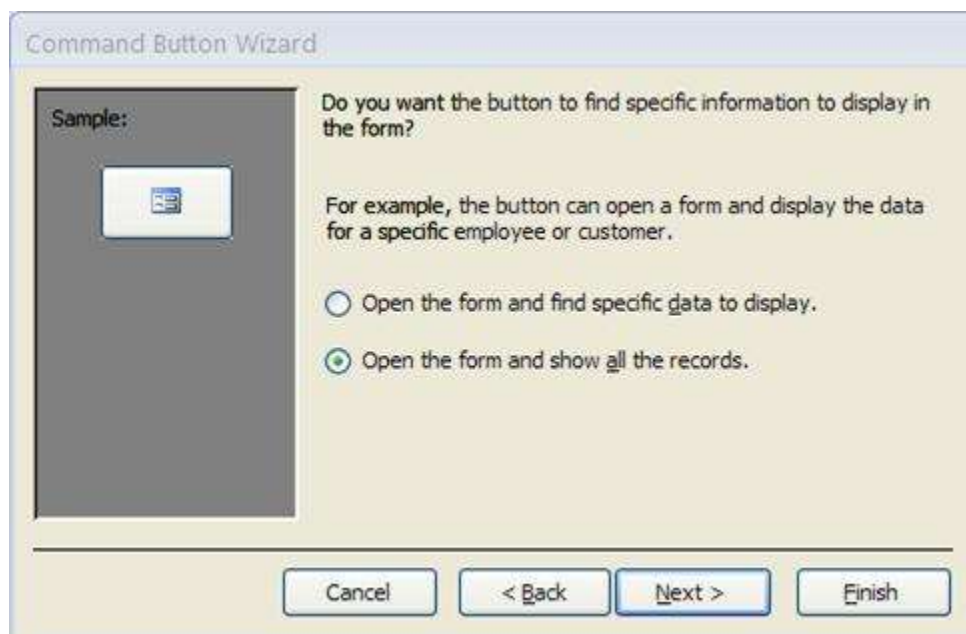

Figure 3.2. Command Button Wizard - Choose the Command Button Options

- ✓ Set your command button option
- ✓ Click Next

- ✓
- ✓ Figure 3.3. Command Button Wizard - Choose How the Button Should Work

- ✓ Choose how the button should work
- ✓ Click Next

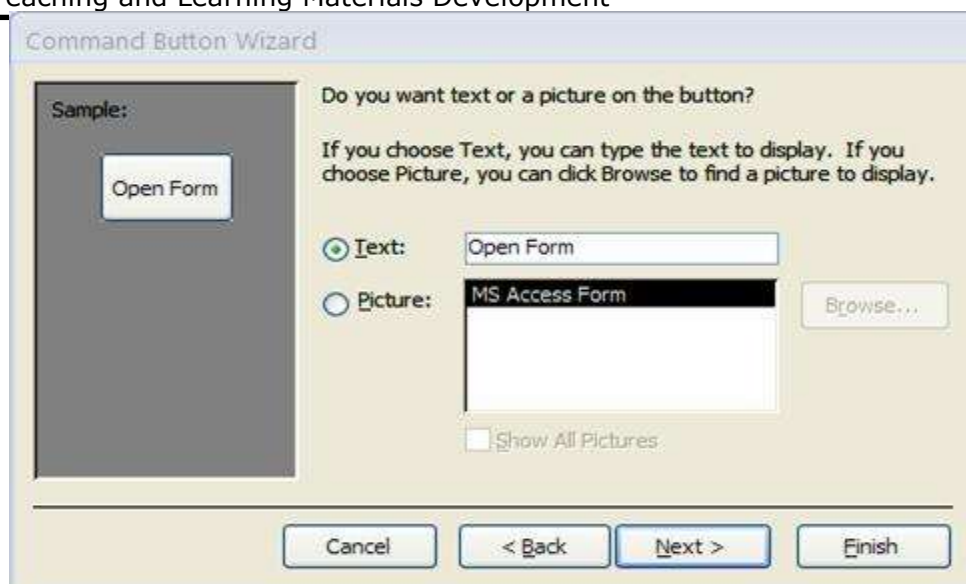

Figure 3.4. Command Button Wizard - Choose Text or Picture Display

- ✓ Choose to show Text or a Picture on the command button
- ✓ Click Next

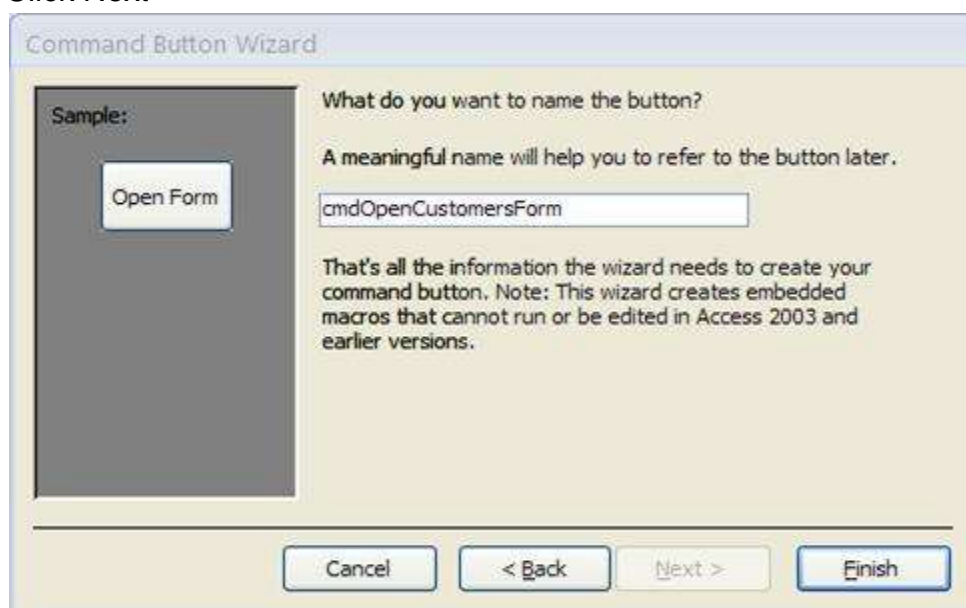

Figure 3.5. Command Button Wizard - Enter Command Button Name

- ✓ Enter a name for the command button
- ✓ Click Finish
- ✓ Save the form

LAP Test

Creating Database Form

Name: _____

Date: _____

Time started: _____

Time

finished: _____

- Task 1
 - ✓ Create a form by using a wizard
- Task 2
 - ✓ Create the Navigation Buttons
 - ✓ Create a label that displays your name
- Task 3
 - Create a text box
 - Insert Picture
 - Insert Chart
 - Create a link to open another form
 - Create control button that closes the form
 - Save the Form
 - Open Existing form
